

The most comprehensive student wellness digital monitoring solution

 **Aware alert**
Extreme risk: Self Harm

 **On-Call analyst response**
Contacted district contacts

Today's students face increasing levels of stress, anxiety, depression, and grief, all of which can severely impact their behavior and academic performance. Without timely support, these issues can escalate to self-harm, violence, or even suicide.

However, school counselors and student services teams are often overwhelmed, managing hundreds of students with limited resources, making it difficult to identify those in urgent need of help.

Securly Aware bridges that gap as the only AI-powered wellness solution with preventative mental health screening, offering unparalleled visibility into student well-being.

With Securly Aware, you can

- Leverage cutting-edge AI to identify early signs of anxiety, depression, cyberbullying, self-harm, and potential violence
- Make it easy for educators to document observed student behavior
- Enable early intervention by monitoring and analyzing students' online activities
- Manage student alert cases efficiently from creation to resolution
- Respond effectively to student safety concerns
- Monitor wellness levels and proactively present students with mental health resources when wellness levels drop
- Scale without bandwidth or other limitations
- Easily monitor blocked and allowed traffic per user

Our school district was able to save the life of one of our students after hours. The alert email from Securly Aware showed the flagged search a student had just made on how to commit suicide. The appropriate school personnel were contacted, and they intervened to extend help to the student and their family that same evening. Having such a wonderful tool truly is a lifesaver!"

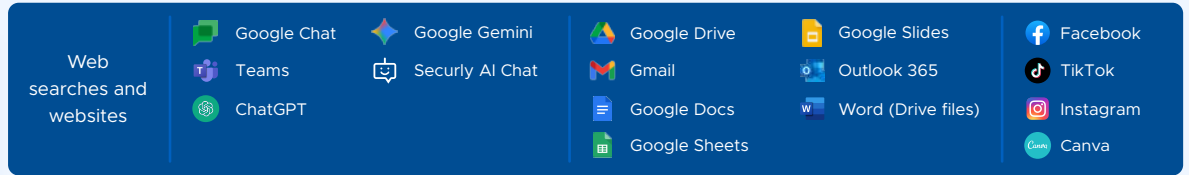

Denise DeJuliannie, Technology Director
Eden Valley-Watkins School District, MN

How Securly Aware Works

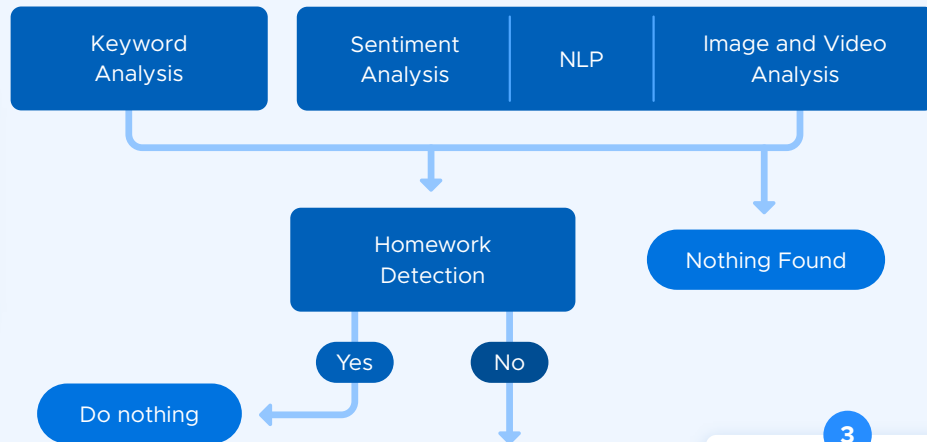

1

Aware analyzes email, social media accounts, Google Drive files, and OneDrive files, as well as web browsing activity.

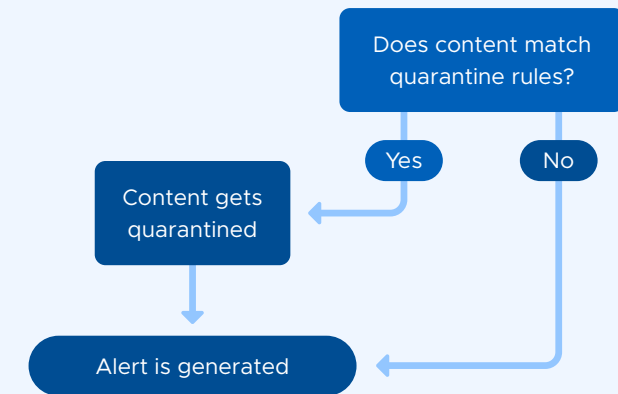

2

The Aware AI engine uses natural language processing (NLP), sentiment analysis, and keyword analysis to determine whether to flag an activity.

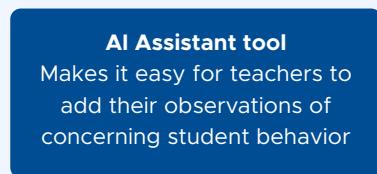

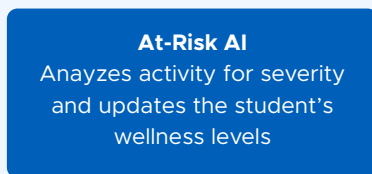

3

If an activity is flagged, it's analyzed against quarantine rules.

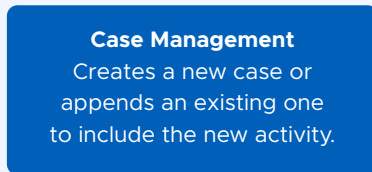

5

The At-Risk AI analyzes the flagged activities and compares them against student history.

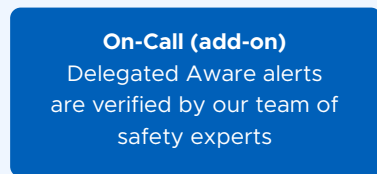

6

If an alert is generated, Aware's case management features creates a new case or appends an existing one to include the new activity.

7

Student services teams work in Aware collaboratively, with the Securly On-Call team providing human verification for non-urgent cases and immediate notification for urgent ones.

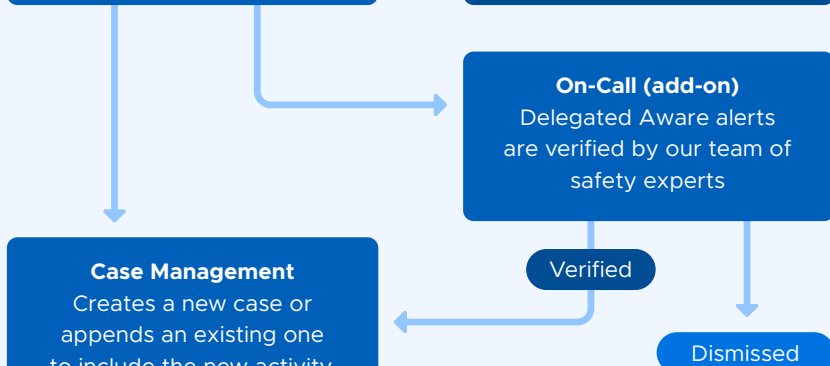

8

On-Call users can focus on only human-verified cases, greatly reducing false positives.

Features

Mental Health Screening

Take a preventative approach by screening students for signs of depression and anxiety well before student behavior raises an at-risk alert.

Wellness Widget

Present students with mental health resources if their wellness levels decline with the Wellness Widget.

Wellness Levels

Know and easily visualize each student's emotional wellbeing—and respond proactively if levels begin to drop.

Think Twice: Bullying Intervention

Curb cyberbullying with Think Twice, which analyzes student posts and emails before they're sent to detect hurtful content, and prompts them to reconsider before sending.

Email Recall & File Quarantine

Automatically recall emails containing violence, bullying, and nudity. Also, quarantine images containing nudity for Google users.

Comprehensive Scanning of Students' Online Activities

Google Drive files, Docs, Sheets, Slides, OneDrive files, emails, social media, conversational AI, and web searches are scanned to identify indications of suicide, depression, violence, bullying, and nudity.

Flagged Activity Alerts

Receive real-time alerts of concerning student activities via email, so designated safeguarding staff can view all alert notifications and activity in their assigned OUs.

In-depth Case Management

Efficiently Manage cases from creation to resolution, ensuring resources are focused on the most at-risk students.

At-Risk AI

At-Risk AI conducts a nuanced analysis of flagged events, including a student's activity history, to determine a student's Wellness Level.

Granular Contact Management (On-Call)

Give admins visibility into the level of resource coverage and adjust according to the contacts' availability or school schedules.

Centralize student support with Securly's suite of solutions

By combining advanced AI with web filter data, student voice insights, and the expertise of safety professionals, Securly Aware ensures that every student feels safe, secure, and ready to learn.

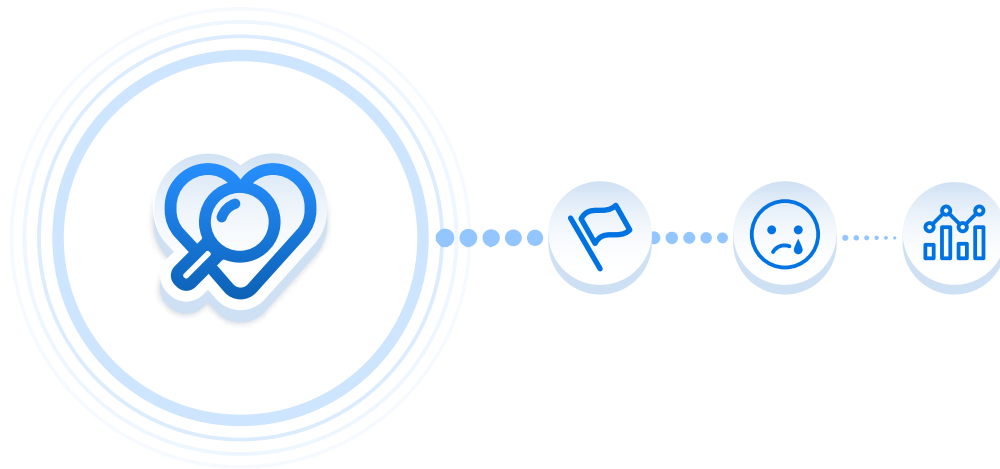

Integrations:

Get additional context for Aware alerts—and visibility and control over all devices regardless of location—with our industry leading, CIPA aligned cloud web filter.

Enlist student safety experts to analyze and validate alerts from Aware and escalate response before things get worse.

Focus your student support services where they're needed most

With Securly Aware, you can identify the students who are most at-risk and intervene before the worst happens. Don't worry about your students' wellness. Know for sure with Aware.
